Eric Castro

AI Agent Engineer / Make-Ready Engineer

Colorado · Open to remote work and relocation
ericygobi@gmail.com · 951-764-7270 · skyrangeforge.com

SUMMARY

Founder and applied AI workflow builder with years of hands-on telecom engineering experience. Sole human creator of Skyrange Forge's systems; directed AI coding agents to build them and directed fixes when processes broke or results were unsatisfactory. Owns requirements, domain decisions, review gates, QC and acceptance, with a focus on checkable outputs and human-controlled delivery.

SKILLS

AI agents & orchestration: Cursor agents, multi-agent handoffs, builder/reviewer separation, tool and function calling, human-in-the-loop workflows.

Evaluation & delivery: Job-level holdouts, hidden tests, contamination audits, regression review, Git worktrees, rollback planning, agent-assisted Python workflows.

Local inference: Self-hosted DeepSeek on dual GB10-class machines as a local OpenAI-compatible endpoint; earlier Nemotron/vLLM setup; latency/throughput/memory benchmarking.

Telecom: Make-ready engineering, joint-use design, pole loading, O-Calc, SpidaCalc, IKE Office, deliverable QC.

EXPERIENCE & SELECTED PROJECTS

Founder & CEO | Skyrange Forge LLC

2026–Present · Remote · Formerly Forge Flow AI LLC

- **MRE Forge — live product:** Directed agents building a human-reviewed workflow for a regional engineering client, converting structured field data and the client's make-ready form into validated notes and PDF, KML/KMZ and Excel deliverables.
- **Agent delivery:** Designed review gates and directed corrective work through specialized managers, Cursor builders, independent reviewers, isolated Git worktrees, regression checks and controlled rollback.
- **Local inference & evaluation:** Directed agents self-hosting DeepSeek on two GB10-class machines as a local endpoint; since Nov 8, 2026 it powers production MRE Forge (switched from Nemotron with backup/rollback). Head-to-head coding benchmarks vs Grok 4.7 matched on correctness. Multi-agent coding tasks can use the local model while reserving capacity for production.
- **Evaluation integrity:** Directed job-separated evaluations, hidden tests and provenance audits; invalidated answer-contaminated reference results instead of treating them as valid evidence.
- **Annotation R&D:** Directed photo-annotation experiments and held detector deployment when improved recall reduced precision; experimental detector work stays separate from the live product.

Make-Ready Annotator | Mountain Ltd

October 2024–Present · Remote

Perform make-ready annotation and quality review of aerial and pole deliverables in IKE Office; translate field-workflow needs into product requirements and acceptance criteria.

Freelance Aerial Engineer | Independent

July 2020–Present · Remote

Prepare pole-loading designs and make-ready applications using O-Calc and SpidaCalc with IKE, Streetsmart and Google Earth data.

Lead Aerial Engineer | Quanta Services

January 2019–July 2020 · Phoenix, AZ

Performed pole loading and joint-use design; QC'd subcontractor engineering and applications. Developed aerial-department processes and trained new hires on loading, make-ready applications and permit coordination.

Aerial Technician | Ridgeline Telecom

September 2017–January 2019 · San Bernardino, CA

Prepared O-Calc and SpidaCalc pole-loading designs.
